## CPSC 349: Front-End Web Engineering - Fall 2020

Homework 2, done by 18 Sep 2020

In this assignment, you will work through Chapter 7 of the textbook (Visual Effects with CSS) to add JavaScript to your Ottergram project.

## Complete the following:

- 1. Work through Chapter 7. As you make changes to main.js, verify that you see error messages reported by ESLint (for example, try leaving off a semicolon).
- 2. Confirm that clicking each thumbnail changes the detail image and title to match.
- 3. Add *previous* (<) and *next* (>) buttons on either side of the detail image. Use the buttons to cycle back and forth through thumbnails and corresponding detail images and titles.
- 4. Push the contents of your project to a new GitHub repository. Do not push this assignment to the same repository as Homework 0 and Homework 1.

## Submission

Turn in the code for this homework by uploading your project to a public repository on GitHub. While you may discuss this homework assignment with other students, you must complete the work on your own.

To complete your submission, print the following sheet, fill out the spaces below, and submit it to the professor in class by the deadline. Failure to follow the instructions exactly will incur a **10**% penalty on the grade for this assignment.
